Vice President Investment Management

Still Pond Capital

About the Firm

Still Pond Capital LLC ("SPC") is a single-family office managing the capital for generations 7-10 of a branch of the duPont Family. Formed in 2004, the office utilizes a data-driven approach to implementing an endowment-style investment program, allocating capital to fund managers across most asset classes on a global basis. Based in suburban Philadelphia, SPC has eight employees focused on investment management and back-office support.

About the Role

We are seeking a Vice President to join our investment team, with the potential for this role to evolve into a chief investment officer position over time. The investment team is responsible for asset allocation across public and private markets, portfolio construction and management, liquidity and risk management, portfolio monitoring and reporting, and the ongoing stewardship of the family's capital with a focus on long-term compounding. The current portfolio is allocated approximately 50% to private assets (private equity, venture, real estate), 20% passive global equities, 10% hedge funds, and 10% cash/fixed income.

The successful candidate will work closely with the principal and existing team members to source, evaluate, structure, and manage investments across asset classes while also contributing to the family office's internal research efforts. This is a high-impact role for someone who wants to take meaningful ownership over how a multi-generational pool of capital is allocated and managed. The Vice President will help shape the overall investment program, including manager selection, asset allocation, portfolio construction, and portfolio positioning, with increasing strategic authority as the role matures. The ideal candidate is highly quantitative and analytical, consistent with the intellectual rigor that underpins the family office's investment philosophy and its orientation toward disciplined, long-term capital allocation.

Key Responsibilities

- Sourcing, performing in-depth diligence, onboarding, and monitoring investment opportunities across asset classes, including the development and maintenance of systematic sourcing pipelines for managers across asset classes.
- Developing and enhancing portfolio models, including cash flow forecasting, pacing, asset allocation optimization, and analytical tools for performance analysis and attribution across the family's investment program.
- Working with the CEO and investment team to establish and continually refine the family office's asset allocation, portfolio construction, and risk management approach.
- Conducting research and authoring internal investment memoranda, market assessments, and presentations to inform the family's strategic decision-making.
- Evaluating new investment strategies, asset classes, and structural opportunities based on market research, competitive dynamics, and the family's long-term objectives.
- Generating quarterly investment reports for the family, reviewing and synthesizing third-party research, market data, and academic literature relevant to returns, portfolio positioning and capital allocation.
- Building and maintaining the family office's proprietary datasets, analytical infrastructure, and reporting systems.
- Partnering with external advisors, administrators, and the operations team to develop and enhance operational diligence practices and investment workflows.
- Training, mentoring, and supervising junior team members.

Candidate Qualifications

At least 8 years of experience in investment management, investment consulting, or data analytics.

- Demonstrated ability to develop creative solutions to unstructured problems.
- A solid understanding of quantitative financial concepts such as performance calculations, risk analysis, valuation, portfolio optimization, statistical analysis and modeling.
- Experience with statistical programming languages (e.g., R, Python, VBA, Excel) and data visualization tools (e.g., Tableau, Seaborn, Plotly, Matplotlib, PowerBI), Airtable, and data storytelling is a plus.
- Competency with major LLM platforms (e.g., Anthropic Claude, OpenAI, Google Gemini) and applied AI techniques including agentic workflow design, skills and connector configuration, recursive prompting and iterative refinement, MCP integration, and token cost management.
- Experience leading small teams and training junior analysts.
- Direct experience working with clients, senior executives, and stakeholders on complex topics.
- Strong verbal and written communication skills.
- Must be eligible to work in the United States without requiring sponsorship.
- Must be willing to live near / relocate to Philadelphia.
